The ***Necchi*** shelving system is the perfect combination between practicality and complex design. The skeleton of the system is made from steel columns that support its various elements. Each column consists of a pair of solid steel rods connected by brass and aluminum elements.

The Necchi is a modular system, giving you complete freedom to place the shelves and storage units according to your needs,

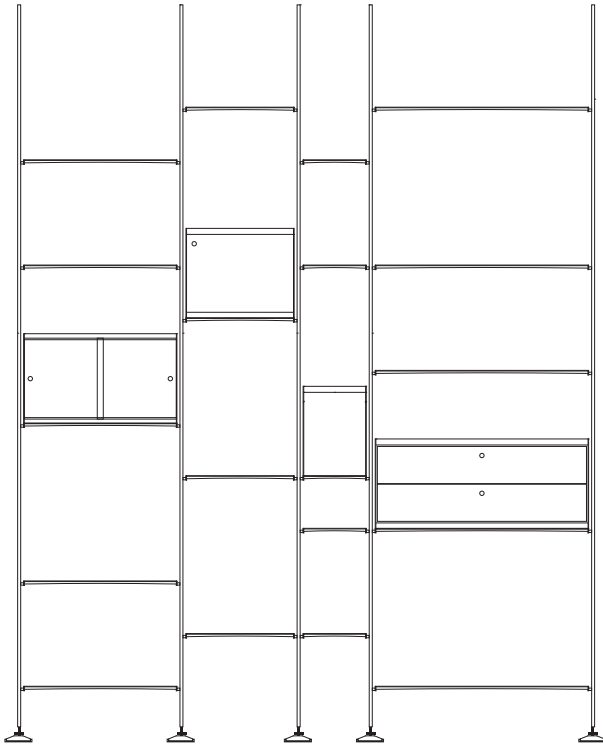

and to choose the details and finishing materials. The system is priced according to size and specification: the number of units, as well as the size and type of the element.

After confirming the first price assessment, the customer will receive an accurate quote according to the finishing details and dimensions. The design process, which includes simulation of the library, will be carried out after an advance payment (usually 10% of the total amount). There is no limit to the amount of time or number of options in the simulation process.

*Example composition, generic library

Elements:

- Column: Two steel rods 10*10 mm (Epoxy powder coating finish, RAL colors) with brass and aluminium connection details.
- Each column has holes at regular intervals that allow for a modular connection of the various elements.
- Steel Shelf S/M/L (Epoxy powder coating finish, RAL colors).
- Wooden Box S/M/L with steel sides (Epoxy powder coating finish, RAL colors). Glass/Steel/Brass/Aluminium door (sliding or hinged door)
- Wooden Box S/M/L with drawers and steel sides (Epoxy powder coating finish, RAL colors)
- Lamp
